

Cord Keeper from Fabric Scraps

Wouldn't these be so nice to keep your cords nice and tidy in a bag or suitcase?

Apply medium weight fusible interfacing to the back of one piece of scrap fabric. Using the pattern template, cut two pieces out of your fabrics, only one piece with interfacing. Cut two small 1 inch pieces of Velcro.

Place the two fabric pieces with right sides together. Stitch around the fabric pieces, 1/4" from the raw edges, leaving 2 inches or so open for turning. Clip the corners close to the stitching line. Notch the two curved ends of the cord keepers.

Turn the cord keepers right side out through the open space. Press. Stitch 1/8" away from the pressed edges, to both secure the layers, and close off the open turning space.

Attach the Velcro pieces to either end of the cord keeper. One side should go on the front, and one on the back.

Wrap around your cords and chargers to keep things nice and tidy. Now you are ready for travel, classes or retreats!
